Good afternoon,

Thank you for your interest in joining our Baseball Operations group. We are excited to invite you to the next round of our hiring process where we'd like to get to know you better. In order to do that, please answer the questions below. For each question, please limit your response to 500 words or less. Shorter is fine, and we value the ability to communicate in a concise manner. Tables, charts and code do not count toward the limit.

We want to see your own thinking. Please do not use AI tools to write your responses or generate your analysis. If you use them for something small, like help with code syntax, just note it at the end.

1. This position is seasonal and based in St. Louis. It requires being on the MLB team's schedule. That includes travel to Jupiter, FL for at least part of Spring Training and working hours that are based on game times, not a typical 9-5 schedule, including evenings, weekends and holidays. The position does not travel with the team. During home games, it includes learning and operating some of our baseball technology and video systems. Are you able to work this schedule? Please tell us about any constraints.
2. Please tell us about your favorite data project you've ever worked on. What languages and technology did you use, and what did you personally build? What made it your favorite, and what are you proud of about it? What went wrong or broke along the way, and how did you find it? What would you do differently if you did it again? If you can, include a link to the code. If the work is private, a redacted snippet or a short description of how it was built is fine.
3. Please list any languages and tools you use (e.g. SQL, Python, R) and rate yourself 1-10 on each, based on what you can do without AI assistance.
4. Please provide a high-level evaluation of Michael McGreevy’s arsenal based on publicly available data (e.g. Baseball Savant) from the 2026 regular season. Are there certain pitches he should throw more or less? Should he remove a pitch entirely from his arsenal or add a new one? Does something stand out as a development opportunity for McGreevy? If you could get access to more information on McGreevy, what information would you like and how would you use it? Your summary can contain as many data tables and visualizations as you'd like, but please include at least one you made yourself, along with the code behind it. Ideally less than 500 words will accompany those illustrations.

5. The Major League coaching staff has asked you to help them determine when the Cardinals should attempt to “send” baserunners in certain game situations. Specifically, they’re interested in identifying optimal opportunities to “send” baserunners home from 2nd base on a base hit. Using public data, can you identify if the Cardinals were “good” at this in 2026? What could they do better in 2027? Please tell us what data you used and how you approached it. Public data can’t show everything (for example, whether a runner was held or waved through), so please tell us what your answer can and can’t say, and include your code.
6. Our front office wants you to identify one hitter who you think will bounce back in 2027 after a poor 2026. Who is it, and why? Use any public data to support your pick. If you had access to information beyond what’s public, what would you want to see, and how would you use it?
7. Optional technical question (you won't be penalized for skipping it, but if you code, this is your chance to show us): Using the attached pitch-level data (pitches.csv, with a data dictionary), estimate the probability that each pitch in predict.csv is a called strike. Send back a CSV with two columns, pitch_id and prob_strike, along with your code (an R or Python notebook is preferred) and a short write-up of your approach. Tell us anything about the data that affected what you did.

Please name your file with your name and return your responses (and your code, or a link to it) to both **mbennett@cardinals.com** and **nlandow@cardinals.com**. We would like to get your responses within a week from today. If you won't be able to complete these questions by next week, or need a different format, please don't hesitate to let us know and we'll work with you to determine an appropriate solution.

If you have any questions at all (about the questionnaire, the job in general, etc.), please do not hesitate to contact us.

Thank you,

Cardinals Baseball Operations
